FYI...

This topic is gaining momentum and I'm monitoring it closely since I teach a course on the topic. I've no idea where EPA stands on the issues, but I sure hope whomever is engaged is up on the science. Jerry Puskin, ORIA, was the agency's rep on the interagency group but he recently retired. ORIA named someone else but I don't know his background. This issue is much bigger than the ionizing radiation issues because it has the potential to negatively impact billions of people worldwide.

All I can do is ring this bell – RING!

My job is done unless you want me to engage further, otherwise, I'll continue to monitor and update my lectures for my UC course.

A Report on Non-Ionizing Radiation

Cell Phone Radiation Boosts Cancer Rates in Animals

U.S. Government Expected To Advise Public of Tumor Risk

The cell phone cancer controversy will never be the same again.

The U.S. National Toxicology Program (NTP) is expected to issue a public announcement that cell phone radiation presents a cancer risk for humans. The move comes soon after its recently completed study showed statistically significant increases in cancer among rats that had been exposed to GSM or CDMA signals for two-years.

Discussions are currently underway among federal agencies on how to inform the public about the new findings. NTP senior managers believe that these results should be released as soon as possible because just about everyone is exposed to wireless radiation all the time and therefore everyone is potentially at risk.
